

## Call for Tender, GDRI-Sud CROCO

**The Coastal and Regional Ocean Community model (CROCO)** is a modeling platform for the regional and coastal ocean using realistic or idealized multiscale approaches. In 2021, the IRD has funded the “Groupement d’Intérêt de Recherche International” (GDRI) Sud CROCO for a period of 4-year. The GDRI-CROCO aims to organize **a call for tender to fund partners projects up to 2,500€**. The projects could have several objectives, such as (not exhaustively): 1) **reinforce existing South-North or South-South collaborations**; 2) **develop new scientific collaborations**; 3) support initiatives **for organizing local workshops or summer schools**; 4) **Support Master students (internship) and PhD students and postdoc** (short-term contract, e.g., 1 month). Our funding may also complement the partners’ own funding and help them participate in other relevant training workshops.

As a reminder, the GDRI CROCO annual allocation for this call of tender is 10,000 €. All requests for support must be submitted by completing and returning the form below. Applications must be carefully written: status of the applicant (including current funding), status of the work, expected results, prospects for funding and co-funding. **Each participant should have an IRD partner in order to help and guide her/him through the administrative process**. Finally, a **short funding report will be asked at the end of the year**.

Please fill out the application form below and return it before March 11<sup>th</sup> to Lionel Renault (lionel.renault@ird.fr) and will be reviewed by Xavier Capet, Patrick Marchesiello, Camille Mazoyer, Pierrick Penven, and Lionel Renault.
